

Installing our theme is extremely simple — just upload all the files to your server. In fact, you can test your theme locally on some browsers, like Safari, as well, except for the contact form functionality, which requires a server side language.

Installing http server

Chrome and Firefox might give you some trouble because of AJAX calls, but you can always install a simple [http server \(https://www.npmjs.com/package/http-server\)](https://www.npmjs.com/package/http-server) to avoid that. You're gonna need to install [Node.js \(https://nodejs.org/en/download/\)](https://nodejs.org/en/download/) — simply download and install it. You're also gonna to use [npm \(https://www.npmjs.com\)](https://www.npmjs.com) as a package manager (it comes bundled with Node.js).

Use the following command to install http-server:

```
npm install http-server -g
```

Then navigate to the project directory and run your server:

```
cd path/to/project  
http-server
```

You should see the following message:

```
Starting up http-server, serving ./  
Available on:  
  http://127.0.0.1:8080  
  http://192.168.1.248:8080  
Hit CTRL-C to stop the server
```

Just open either of those addresses in Chrome or Firefox to test your web-site locally.
