

In order to make the form work and send you the messages you need to configure it. The config file is placed in `mailer/` directory. Include all of the required information for the PHP mailer to do its magic.

Troubleshooting

Sometimes, some complications might arise due to the specifics of your Hosting provider. Make sure you check out the [PHPMailer troubleshooting](https://github.com/PHPMailer/PHPMailer/wiki/Troubleshooting) (<https://github.com/PHPMailer/PHPMailer/wiki/Troubleshooting>) page in that case.
