There's a variety of single pages you can use to showcase your projects or write blog posts or news articles.

Single work pages

Project showcase

This type uses a pretty simple structure, with [parallax (http://materializecss.com/parallax.html)](http://materializecss.com/parallax.html) image on top, detail items and beautiful paragraphs of text that are followed by [Material Box (http://materializecss.com/media.html)](http://materializecss.com/media.html) images. There is also a 3-column flow description. Don't forget to initialise parallax and Material box:

```
$('.parallax').parallax();
$('.materialboxed').materialbox();
```

Gallery

This type takes advantage of parallax yet again and [Materialize slider (http://materializecss.com/media.html#slider)](http://materializecss.com/media.html#slider), which follows this structure:

```
<div class="slider">
    <ul class="slides">
        <li>
            <img src="./assets/images/work/bottle-detail/bottle-3.jpg" alt="Bottle III" />
        </li>
        <li>
            <img src="./assets/images/work/bottle-detail/bottle-4.jpg" alt="Bottle IV" />
        </li>
        <li>
            <img src="./assets/images/work/bottle-gradient-2.jpg" alt="Bottle Concept II" />
        </li>
    </ul>
</div>
```

It also needs to be initialised via Javascript. We also define a small check in order to set the slider's height:

```
$('.parallax').parallax();
var height = window.innerWidth < 600 ? 350 : 650;
$('.slider').slider({height: height});
```

Right and left fixed

These two have an image sticked to the right of left side of the screen, while the text is being scrolled on the opposite side. Use the following structure to achieve that:

```
<div class="full-half left-side" style="background-image:
url(./assets/images/work/bottle-gradient.jpg)"></div>
<!-- or -->
<div class="full-half right-side" style="background-image:
url(./assets/images/work/coo-coo-clock.png)"></div>
```

Your columns with text and other content will have a `offset-l6` class for the left fixed version.

For dark versions, you might want to pass a mix-blend-mode to the Navigation bar, so it's always readable:

```
if ($('body').hasClass('dark')) {
    $('.navbar-fixed').css('mix-blend-mode', 'difference');
}
```

Fullscreen sections

See the [fullPage.js (http://alvarotrigo.com/fullPage/)](http://alvarotrigo.com/fullPage/) page for more information and documentation.

Pagepiling

See the [pagePiling.js (http://www.alvarotrigo.com/pagePiling/)](http://www.alvarotrigo.com/pagePiling/) page for more information and documentation.

Single news article pages

Video

Use `.video-container` class to create responsive video embed:

```
<div class="video-container">
    <iframe src="https://player.vimeo.com/video/26906724?
color=ffffff&amp;title=0&amp;byline=0&amp;portrait=0" allowfullscreen="">
</iframe>
</div>
```

Audio

There's nothing special about using audio embeds, just copy/paste the code for the media:

```
<iframe width="100%" height="166" scrolling="no" frameborder="no"
src="https://w.soundcloud.com/player/?
url=https%3A//api.soundcloud.com/tracks/134934525&amp;color=000000&amp;auto_pla
y=false&amp;hide_related=false&amp;show_comments=true&amp;show_user=true&amp;sh
ow_reposts=false"></iframe>
```

Right and left fixed

Are exactly as the ones for single work pages :-)
